

Hackton Website Update

Project Title: Updating of the Hackton website pages to help better user management and to display other of Hackton products and transform the designs to a premium interface.

Prepared By: Hackton CEO.

Date: September 18, 2025

1. Executive Summary:

Hackton aims to design and develop a robust, user-friendly, and globally competitive Website Management Platform, Virtual Learning Management system and Media Platform modeled after Moodle or similar high-ranking platforms. This platform provides domain management, website customization and development, diverse learning and education, website security and authentication, blogging and entertainment, business promotions, resources and built in screen tools.

The system will support buying, transferring and managing of domain names, customizing, branding, developing and managing of website, interactive learning, examination predictions, security APIs, buying of business email (yourbrand.com), launching of website whit panel for VPS and sheared hosting, buying of business email sender for marketing promotion and newsletters, purchasing of website builder, integrating of custom admin panel and analytics for all kind if website, reading and exploring of contents and many more.

Pages To be Updated:

1. Home Page:

Page should be updated to display all the products Hackton offers on different sections and also a change in the header and footer of the page to march a premium design.

List of product & services to display:

- Domain Name Registration, Transfer, Management, WHOIS lookup:

Display in a section with writeup of domain and image showing all the domain services button on buy domain name or even a search whit buttons, this will also show other products that can be connected whit is the business email, might display a video instead
- VPS Hosting:

Display in a section with writeup of VPs and image show VPs servers, deployment management 99.99% uptime grantee.
- Sheared Hosting:

Display of the seared hosting services and premium features.
- Business email sender:

This will show the product and service for the Hackton email sender that help to send custom emails whit html page from websites Note that its not about business emails for brand example of what I mean is mailersend.com

- **Hosting Panel :**

For hosting of website through a custom panel for example cPanel show the ability and how the product work and help to host your website in minute.

- **Website Builder:**

Display the uniqueness of the Hackton website builder product and services must include a video for better understanding

- **Hackton Admin and Analytics:**

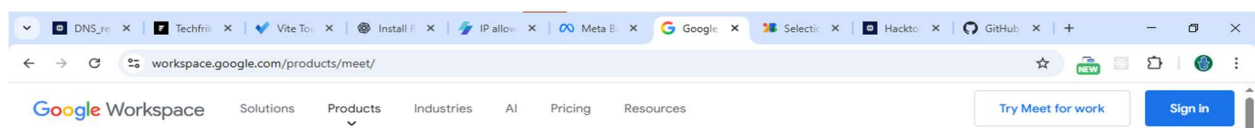

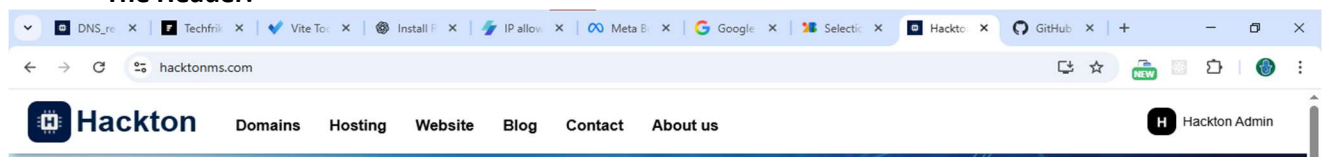

When it comes to this simple description it helps u manage your website not just manage fix and can make changes in your website too for example when u build your website whit the Hackton website builder you will need a admin panel that can help you analyze your website that is when the Hackton admin comes in helps in analyzing and uploading like for blogs or products and services, keeps track of the website performance and many more. Section must also include video.

- **Round up:**

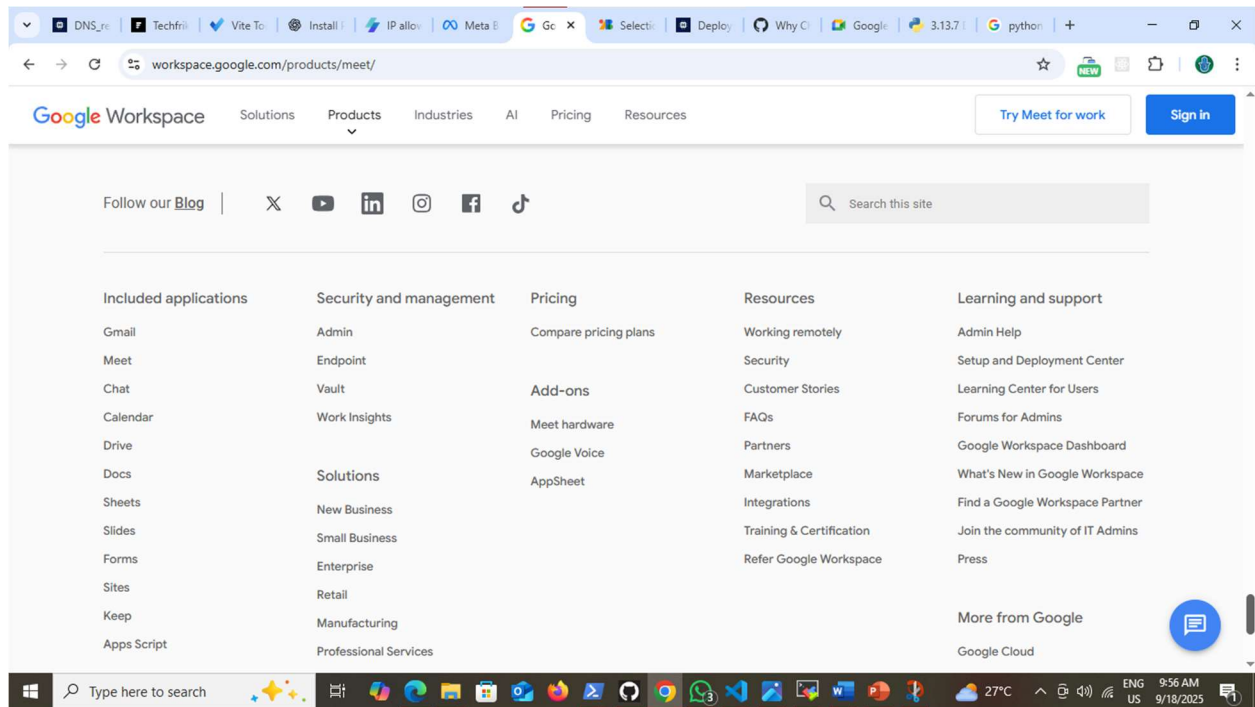

Include other core functions that should be in a home page like why u should use Hackton and the solution Hackton brings to the society FAQ etc.

Image examples:

The Header:

The footer

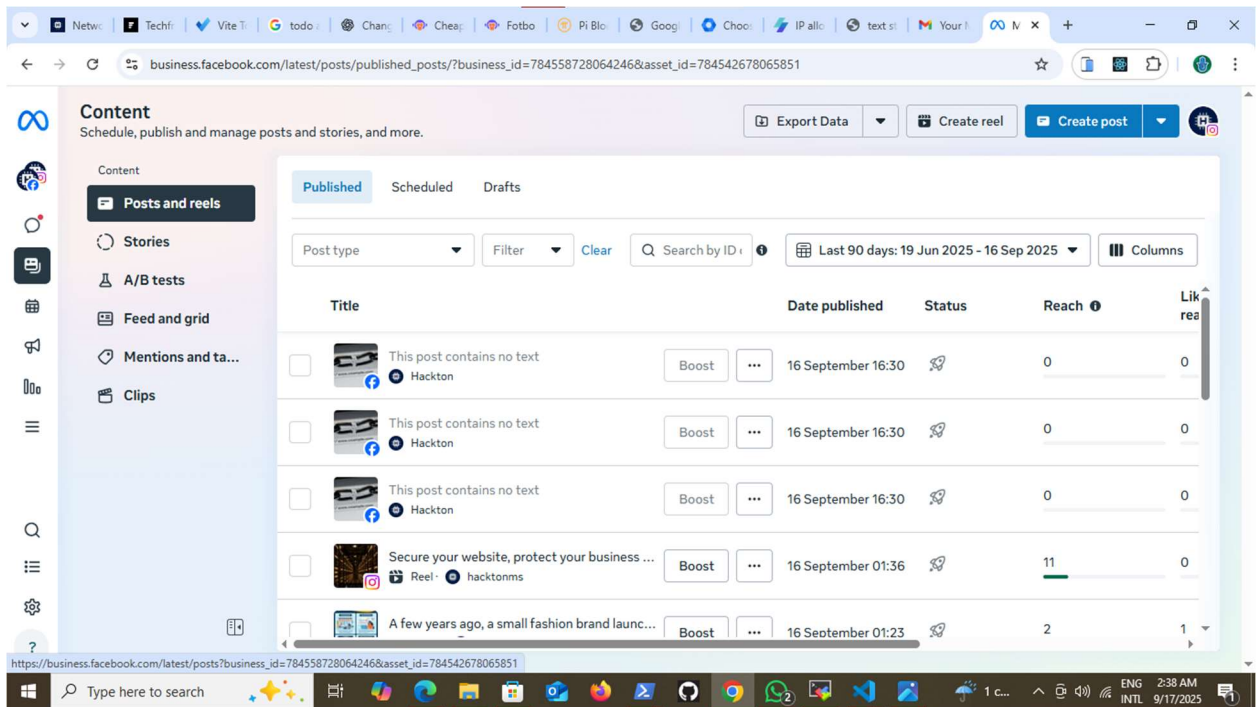

2. The dashboard:

The dashboard and every page under it should be changes to for a more presentable design and also contain a page for managing every product purchased, the dashboard will also contain ai feature to help users manager products whit more efficiency, in the product design like the domain and VPS hosting there should be a button saying connect to allow user easily connect to other product that required it .

Image example:

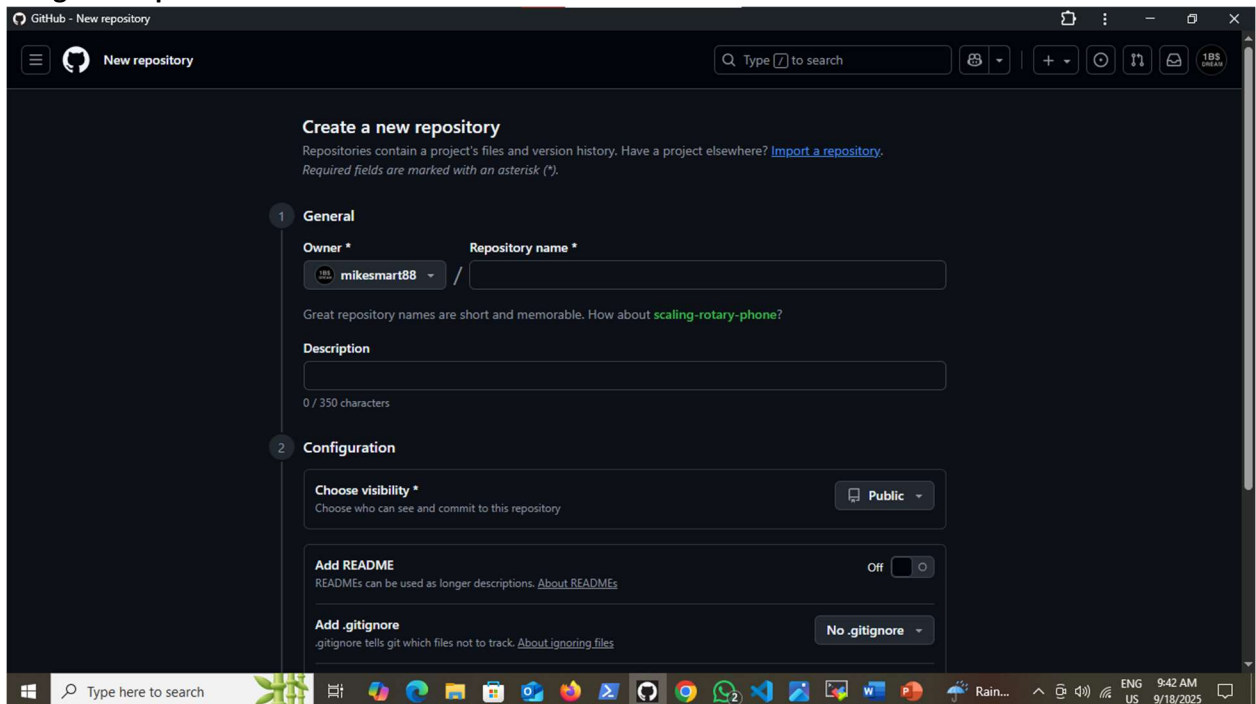

like the meta business dashboard whit a unique display but changes will be made for the Hackton but the images is a example of how it should look.

3. The Deploy VPS page:

The deploy VPs page should be change to a better understanding page for the users whit guidelines step by step on what to do, whit good design and uniqueness .

Image example:

Note: use the existing page and add the same data to be collected in place use the like this image type, the select plan type should not be in a selection must be in a box grid in a straight line and scrollable same goes for the OS selection.

4. The Website Page:

The page for website production will be updated showcasing the many features in the Hackton website builder and the pricing and planed and also core feature on how it works.

Note: Design must be unique and modern, and also include image and videos showcasing how its benefitable and how it works

New pages to be added:

1. Domain WHOIS page:

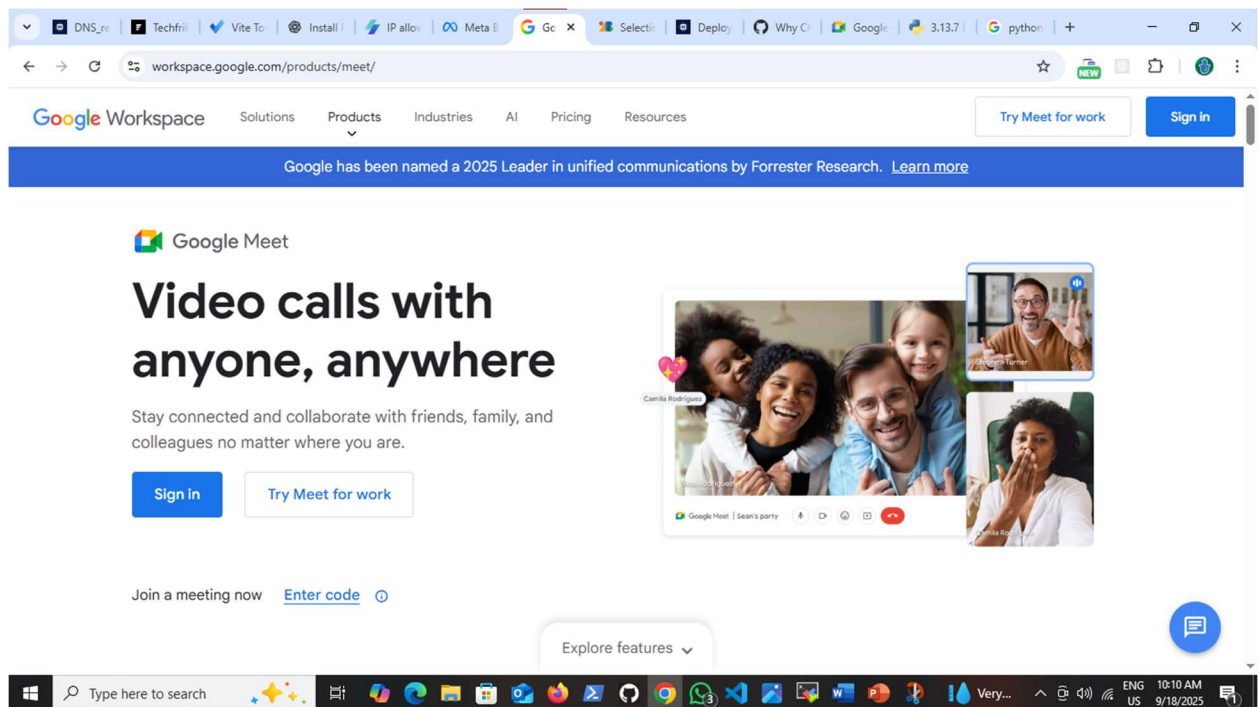

Just like other domain providers a WHOIS page need to be added for Hackton simple but premium design a search bar where people can search for a particular domain and get the info related to the domain they search for but the info is only allocated to domain registered in Hackton

2. Business email Page:

A page to purchase business emails will also be added for user whit design and core values along whit the pricing and free trial too, by business email I mean yourbrand.com for sending and receiving email from your client or customers.

Image example:

The google workspace is a clear example but it will be showcasing about Hackton and some changes will be made .

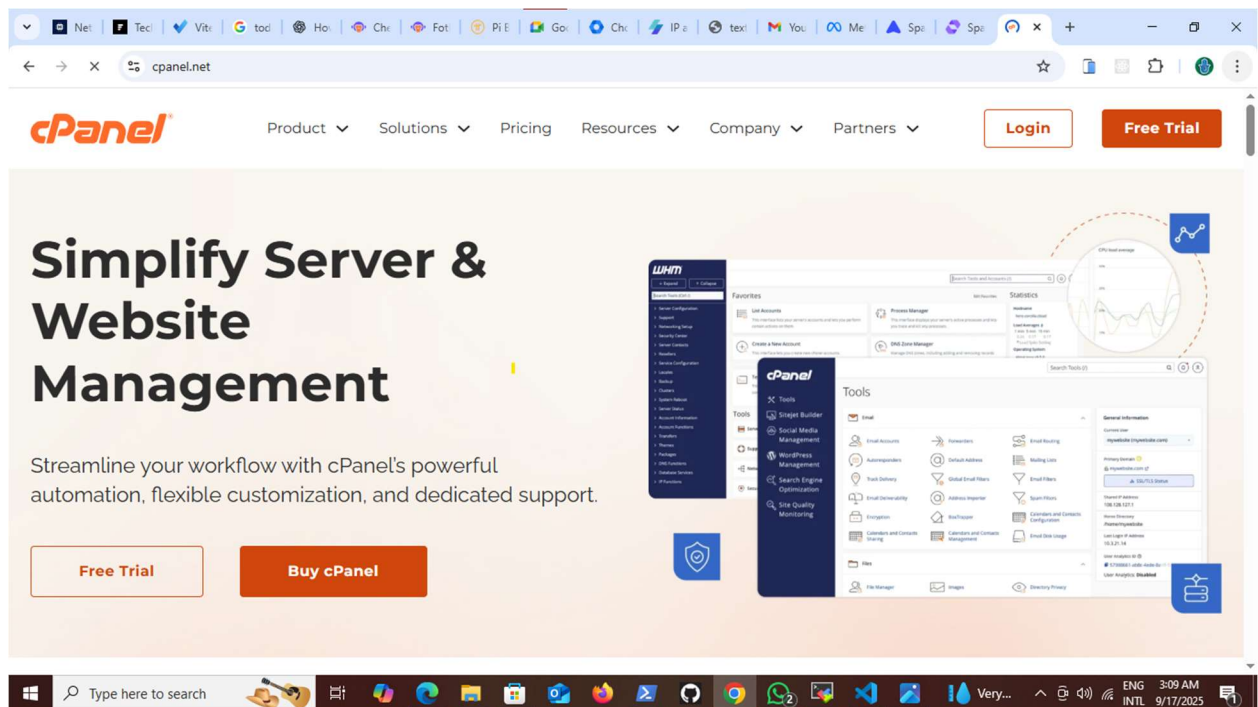

3. Sheard Hosting page:

A page for sheared hosting will be added showcasing the features and images and benefits like free Hackton hosting panel for sheared hosting user to host there website at affordable prices, page will display the sheared hosting plans whit prices and the features that come along whit the plans etc.

4. Hosting Panel page:

The hosting panel display page come after the sheared hosting page to show the core features and value and the solution it solve for user and other developers like cPanel free trial are given and also display of the plans prices and benefits that show with the Hosting panels.

Image example:

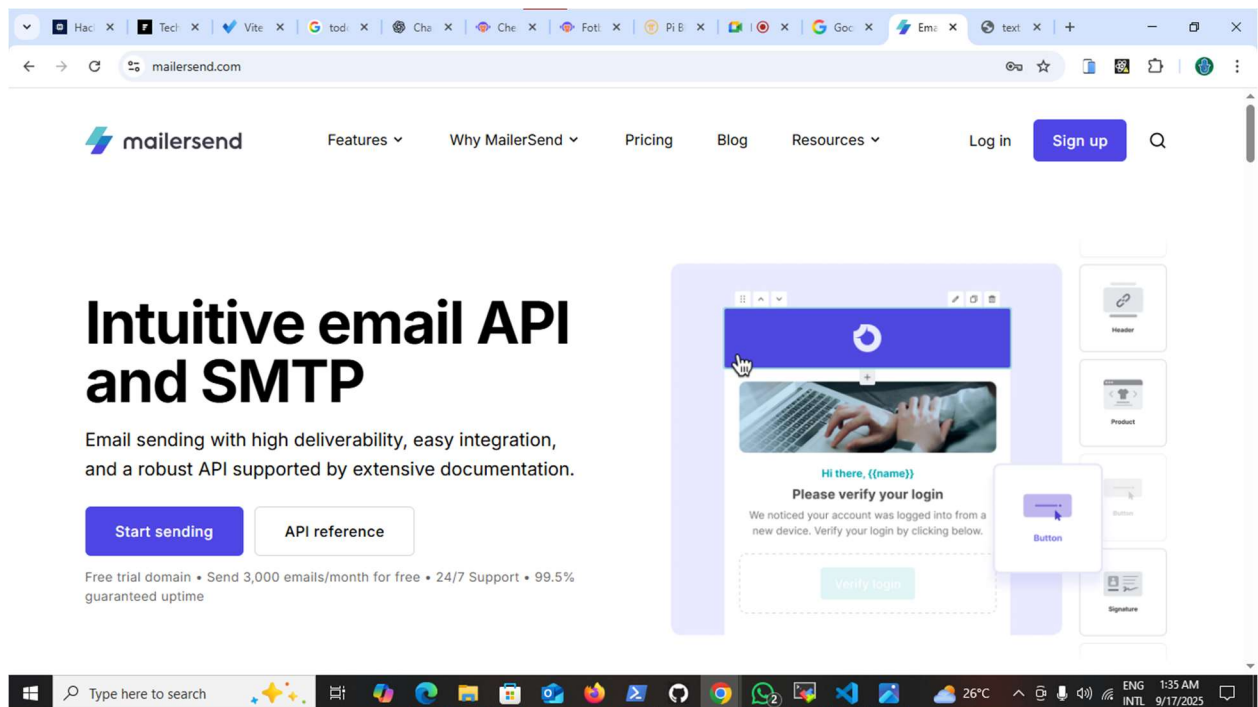

Like the cPanel design whit a more amazing and premium design changes the header or footer will not be added it will still be the same as the Hackton homepage, page should include video examples.

5. The Email Sender page:

There will be a page for transaction email showing the email benefits plans and features whit the plan and pricing example something like mailersend.com

Image example:

6. The pricing page:

A page showcasing all the products and its pricing core feature and benefits including gift that comes with the purchase and also a section for reviews on the prices.

7. Paid SEO page:

This page is for business who are looking for ways to increase their website or business search appearance to rank top, the page will showcase the plan prices and benefits which include, better search engine ranking, promotion on different countries, brand trust, website visibility and many more.

8. Admin/Analytics page:

The page will display the efficiency of the Hackton admin analytics features and that help user manage their website contents upload, user and many more contents you can connect a website to it, the page will show the plans and benefit which is only 3 plans the free, standard and pro plan, Affordable plan for every website owner that does not have an website admin panel or need a custom one etc.

9. Docs and learn page:

The docs for user to learn content about the feature and how to use them in the page will be a simple neat page with content including images etc.

The learn page will include courses, videos some will be paid and some will be free on how to do multiple things not just about the company but also other things too there will be a search on the top with a show hero section and then display the videos and their topics like a Youtuber's Channel etc.

Conclusion:

The website changes are to be made for a better and user friendly platform for the social world where developers, students and businesses that archive their online goals all in one place without any issues, join Hackton to strengthen the online world for a better future.
