

Business Requirement Document (BRD)

Project title: Design and Development of Business email platform for receiving and sending business emails whit brandnames

Prepared by: Hackton CEO.

Date: September 23, 2025

1. Executive Summary:

Hackton Business email aims to design and develop a platform where business owners and multiple people can manage and use their brand name to send business emails, though the dashboard given to them by Hackton or though a third party e.g google, outlook etc.

2. Objectives:

1. **Accessibility:** Provide a dashboard where user can manage and send emails.
2. **Scalability:** Ensure the platform can support numerous concurrent users.
3. **Flexibility:** Allow customization and easy access for user in the platform.
4. **Engagement:** Corporate feature to enhance business, development and learning.
5. **Integration:** Make sure the emails can be connected whit third parties.
6. **Security:** Customizable security, ensure data protection and secure user authentication

3. Scope:

Include:

- Design and prototype
- Development of web-based platform
- Core modules: User management, email dashboard, login system.
- Personal and third parties integration.

Exclude:

- Hardware procurement for users.
- Offline accessibility.

4. Key Features:

4.i User Management:

- Roles: Admin, User.
- Profile management and customizable dashboard.

- Single sign-on (SSO) and multi-factor authentication (MFA)
- Security customization and authenticator.

- Sending and receiving emails.
- Email Controls and customization.
- Email spam and trash bin.
- Analyzing and database management.

4.iii User Management:

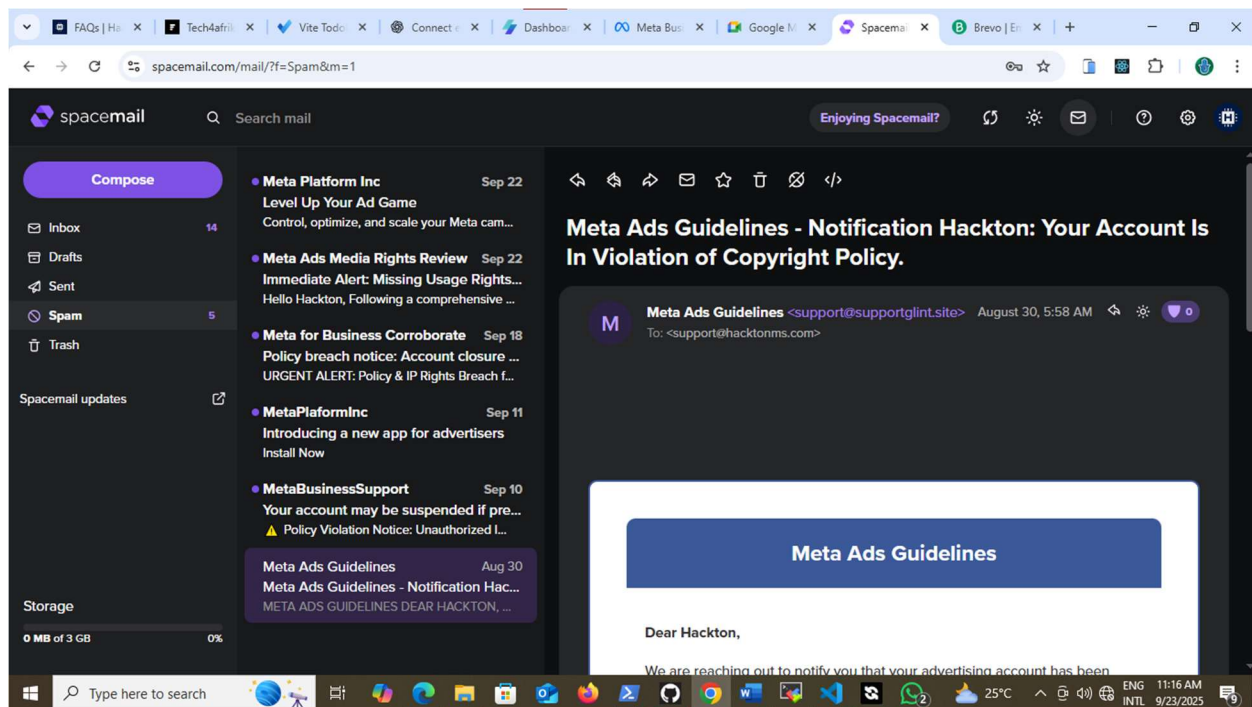

- Login and logout.
- Dashboard control.
- Customization and integration.
- Security check.

5. Tools and Technologies:

- **Stacks:** PYTHON, JavaScript, XML, JSON.
- **Framework:** DJANGO, Node.js, React
- **Hosting:** VPS cloud service configured whit NGINX.
- **Third-Party Integrations:** Email APIs.
- **APIs:** RESTAPI, DJANGOESFRAMEWORK.
- **Database:** Postgres SQL.

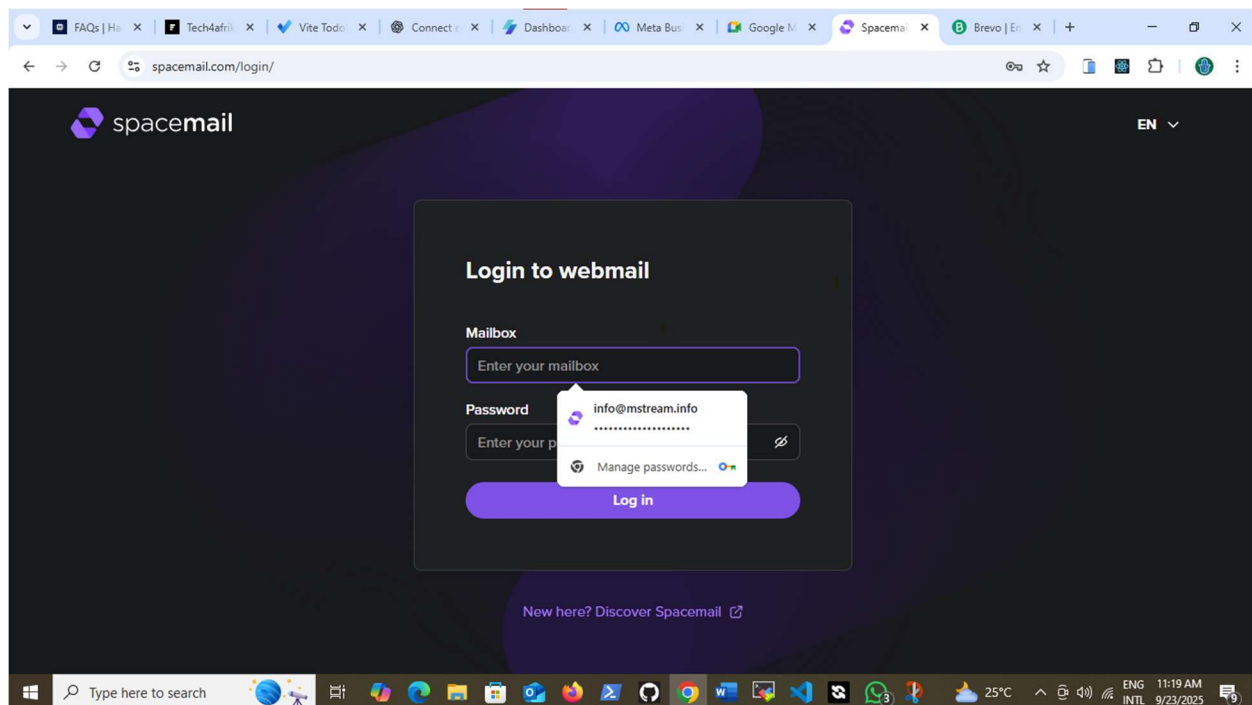

6. Image Examples:

Dashbords:

Example of what it should look like or a better design will also be good.

Login form:

A simple login whit just mailbox name and it password required.
